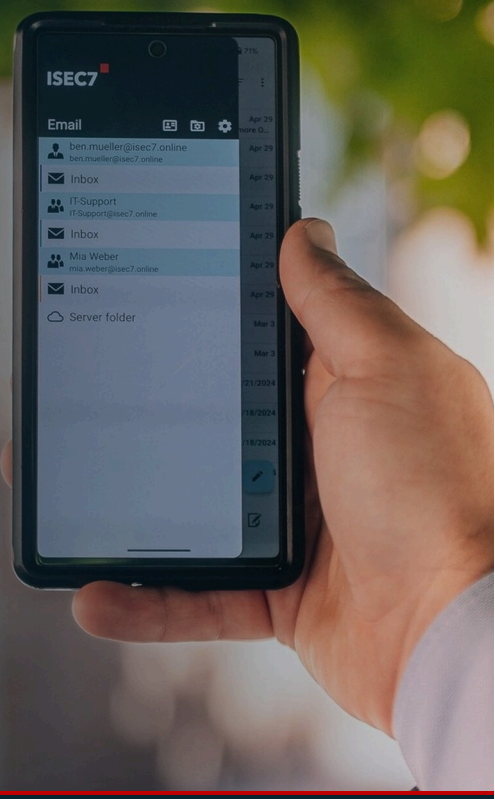
ISEC7
THE DIGITAL WORKPLACE COMPANY

ISEC7 MAIL

The full Exchange mailbox on the smartphone.

Mail, calendar, contacts, tasks and notes from Microsoft Exchange and Microsoft 365, with shared mailboxes, delegate access and S/MIME. Used by government and law enforcement.



iOS, iPadOS, Android
one client for all users

5 UEM containers
or unmanaged from the app store

Hybrid-ready
Exchange Server on premises and Exchange Online

Data sovereignty
sovereign software from Germany by the ISEC7 Group

CHALLENGE

Many familiar Exchange functions are missing on mobile devices: the shared mailbox, the calendar you manage for someone else, the public folder. For an authority or a management office, those are the functions daily work depends on.

ISEC7 MAIL brings them to the smartphone and tablet, with S/MIME and inside the container of your UEM.

CAPABILITIES

ISEC7 MAIL connects directly to Exchange Server on premises, Exchange Online or a hybrid setup, over Exchange Web Services (EWS) rather than Exchange ActiveSync. For Exchange Online, the move to the Microsoft Graph API follows. No middleware component or relay service from ISEC7 sits in between.

The app runs from the app store or inside your UEM container, on iOS, iPadOS and Android.

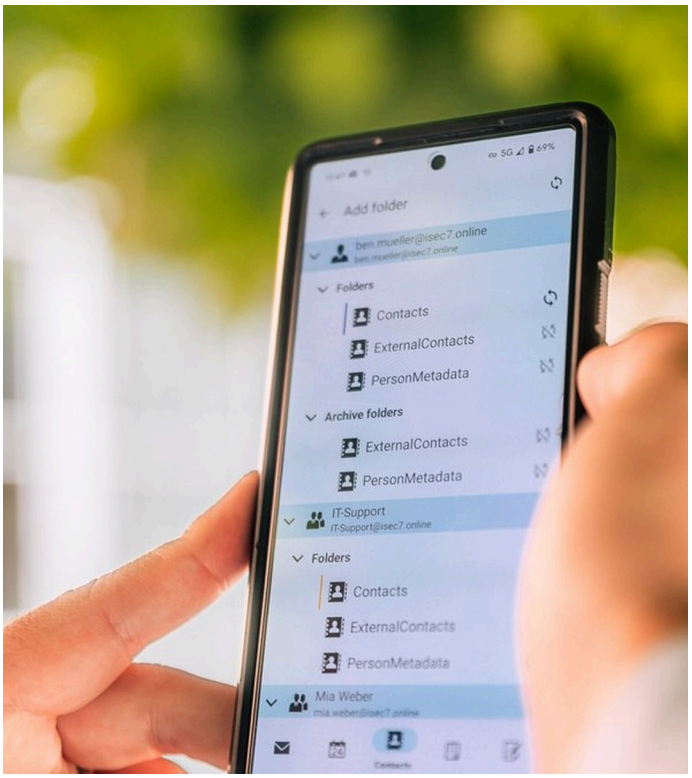
THE SOLUTION & USP

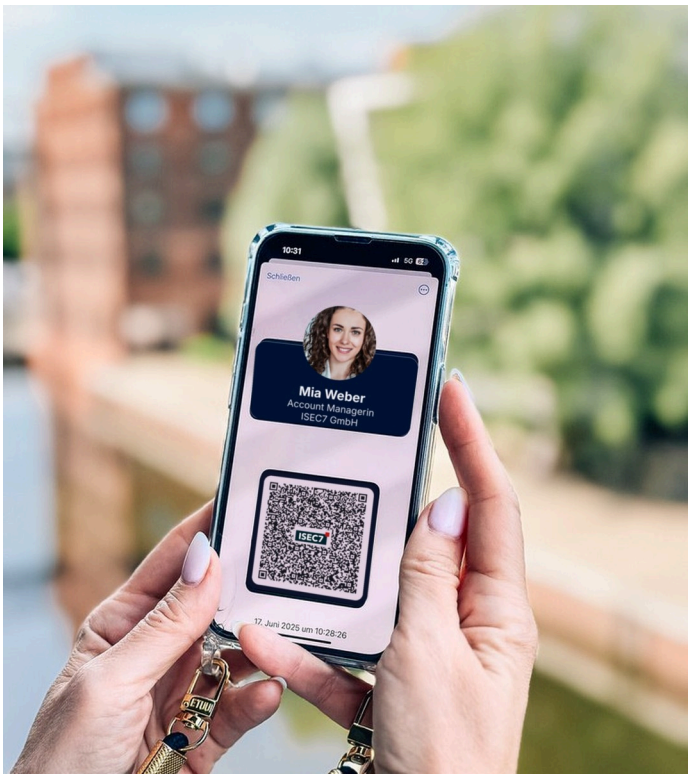
- Email on mobile devices without giving up functionality: mail, calendar, contacts, tasks and notes
- Delegate rules and functional mailboxes on the phone, without anyone sharing a password
- One email client for all users, independent of the client your UEM vendor ships
- S/MIME encryption, with certificates on a YubiKey or smartcard if required
- Displays Microsoft Purview sensitivity labels and applies them when composing
- Global address list and Salesforce contacts, with name resolution for incoming calls in the car

TARGET GROUP

- Organizations with Microsoft Exchange, Microsoft 365 or hybrid environments
- Authorities and companies that work with functional, shared and group mailboxes
- Executives and their assistants who need delegate access

Since 2003, the ISEC7 Group has run Digital Workplace and Managed Mobility Services for public authorities, international enterprises, operators of critical infrastructure (KRITIS), companies that handle classified information and other organizations with strict compliance requirements. Over 700 customers worldwide, among them governments, police forces and armed forces. ISEC7 is headquartered in Germany, with locations in the USA, Australia, New Zealand and Poland.





SCOPE OF FUNCTIONS

- Mail, calendar, contacts, tasks, notes and public folders
- Functional, shared and group mailboxes, group calendars
- Several mailboxes and email domains in one app
- Email summaries with on-device Apple Intelligence on iOS
- ISEC7 CLASSIFY add-on for your own classification schemes, recipient checks and auditing

WHY KRITIS OPERATORS CHOOSE ISEC7 MAIL

- Sovereign key control: encryption keys and key management stay under the customer's control, within national jurisdiction
- Minimized and protected metadata: fewer exposed metadata and protected message headers
- Sovereign mobile email: runs fully on premises, hybrid or online, with legacy and modern authentication
- Built for high-security use: end-to-end encryption, strict authentication and hardened client configurations for board, diplomatic and executive communication

SECURITY

- Native UEM container integration for BlackBerry Dynamics, Ivanti AppConnect, Omnissa Workspace ONE, Microsoft Intune and Citrix
- Authentication with modern auth, hybrid modern authentication, certificates, AirID, YubiKey, CAC cards, smartcards with external card readers and Hypergate
- S/MIME for multiple mailboxes, with separate certificates for signing and encryption
- Ongoing Veracode verification for software development
- GDPR-compliant use of contacts in the car (Apple Car Kit integration)
- Red-network capable in combination with Hypori
