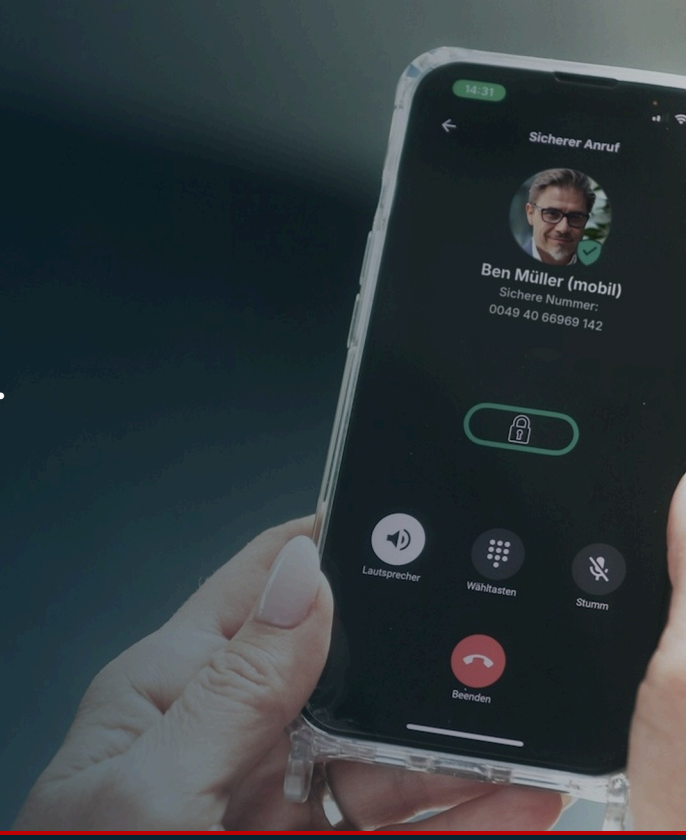
ISEC7 MANAGED SECURE VOICE

Highly secure voice communication. Simple as a phone call. Secure as in the Chancellery.

Encrypted mobile calls up to VS-NfD, as a managed service from ISEC7 and Secusmart.



Up to VS-NfD
BSI operating permission BSI-VSA-11057 for SecuVOICE

Apple and Samsung
an app on the work phone

Made in Germany
hosted in Germany, run by security-cleared staff

Three call routes
end to end, Secure Landing, Breakout

CHALLENGE

Mobile calls can be intercepted at several points: on the radio link, in the transport network and while roaming. Ordinary telephony does not protect against that. Anyone who has to speak confidentially needs a connection that is encrypted along the whole route.

OPPORTUNITY

NIS2 requires multi-factor or continuous authentication, secured voice, video and text communication and, where needed, secured emergency communication. ISEC7 MANAGED SECURE VOICE covers the voice part of these measures.

THREE WAYS A CALL CAN GO

- Another SecuVOICE device: End to end, up to VS-NfD
- Agency phone system: Secure Landing, up to VS-NfD
- Public phone network: Breakout, encrypted as far as the federal infrastructure

TARGET GROUP

- German federal states and their subordinate administrations
- KRITIS operators and NIS2-regulated companies
- Public sector companies
- Companies that handle classified information

AVAILABILITY

The service uses key material of the German federal government (BSI standard). Sales are therefore limited to German companies and authorities.

The app option requires an MDM configuration that meets the VSA. Without a compliant UEM of your own, there is the full-managed smartphone.

WHO DOES WHAT

Secusmart provides the SecuVOICE app. ISEC7 runs the service, requests the key material from the BSI and is your contract partner.

Since 2003, the ISEC7 Group has run Digital Workplace and Managed Mobility Services for public authorities, international enterprises, operators of critical infrastructure (KRITIS), companies that handle classified information and other organizations with strict compliance requirements. Over 700 customers worldwide, among them governments, police forces and armed forces. ISEC7 is headquartered in Germany, with locations in the USA, Australia, New Zealand and Poland.

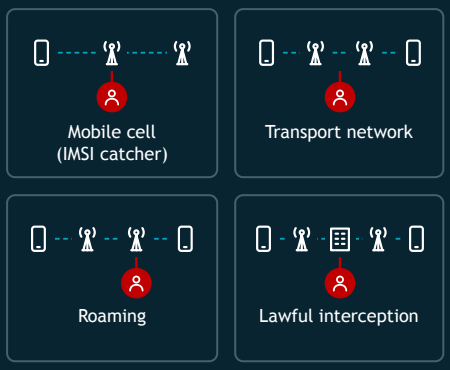
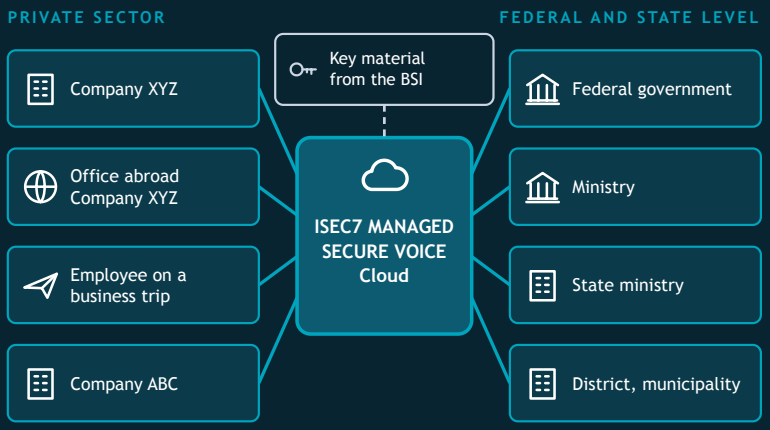
HOW MOBILE CALLS ARE INTERCEPTED



Marked in red: the point where the call is tapped.

THE ISEC7 MANAGED SECURE VOICE CLOUD

Calls between all participants on the Managed Secure Voice platform



VS-NfD-compliant calls between federal government, federal states and the private sector

THE SOLUTION & USP

Highly secure voice communication up to VS-NfD
Tap-proof telephony for Apple and Samsung devices, based on the SecuVOICE app from Secusmart with BSI operating permission.

The Chancellery standard for organizations
Security at the highest level, now also for public sector companies, KRITIS organizations and companies with strict compliance requirements.

Simple to use, maximum security
The app works as simply as an ordinary phone call.

Made and hosted in Germany
Run by security-cleared staff in Germany, under German security guidelines.

Future-proof
Already compatible with the requirements for cross-organization communication up to VS-NfD.

AREAS OF APPLICATION

Exchange of confidential information
Secure transfer of sensitive data between authorities and companies.

Communication in a crisis
Reliable voice communication during cyber attacks and emergencies.

Protection against industrial espionage
A preventive measure against the loss of business-critical information.

Defence industry and defence-related sectors
Tap-proof calls in security-relevant industries.

Closed user groups
Secured communication for boards, committees and project teams with sensitive tasks.
