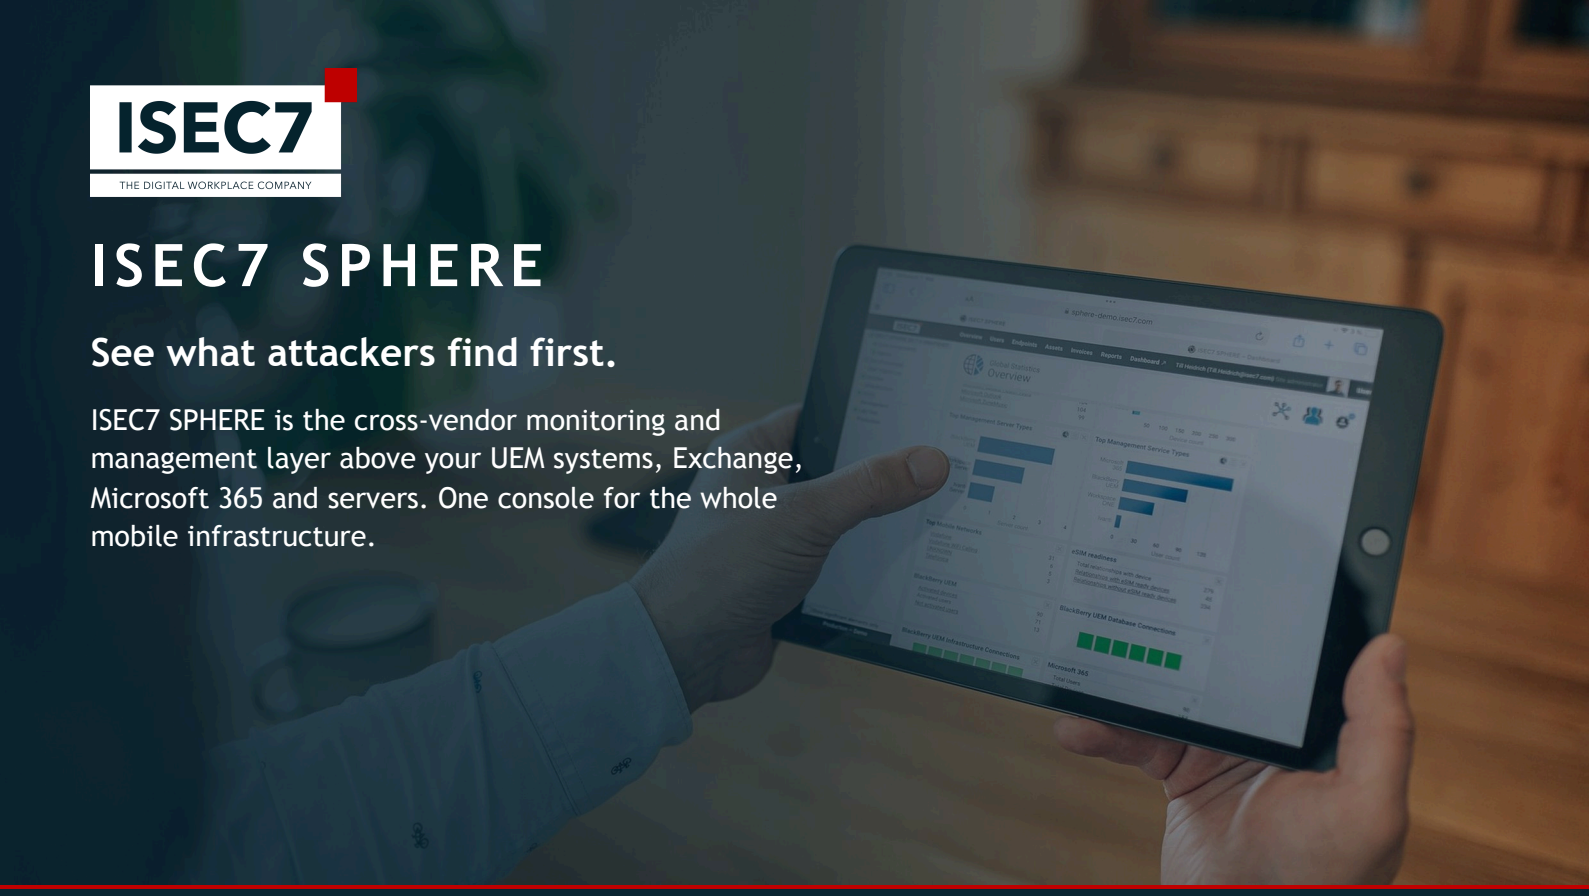
ISEC7
THE DIGITAL WORKPLACE COMPANY

ISEC7 SPHERE

See what attackers find first.

ISEC7 SPHERE is the cross-vendor monitoring and management layer above your UEM systems, Exchange, Microsoft 365 and servers. One console for the whole mobile infrastructure.



In the market since 2005
monitoring for mobile infrastructures

One console
for BlackBerry UEM, Ivanti, Omnissa and Microsoft Intune

On premises or cloud
you decide where it runs

CVE check
server versions against the NIST database

CHALLENGE

Mobile infrastructures grow in pieces: one UEM here, a second one after a merger, Exchange, Microsoft 365, certificates and tokens with their own expiry dates. Each system has its own console, and nobody sees the whole picture.

What goes wrong is rarely spectacular. A certificate runs out, a server misses a patch, a token expires over the weekend.

CAPABILITIES

ISEC7 SPHERE collects the status of all connected systems in one place, checks it against known vulnerabilities and expiry dates, and raises the alarm where your team already works.

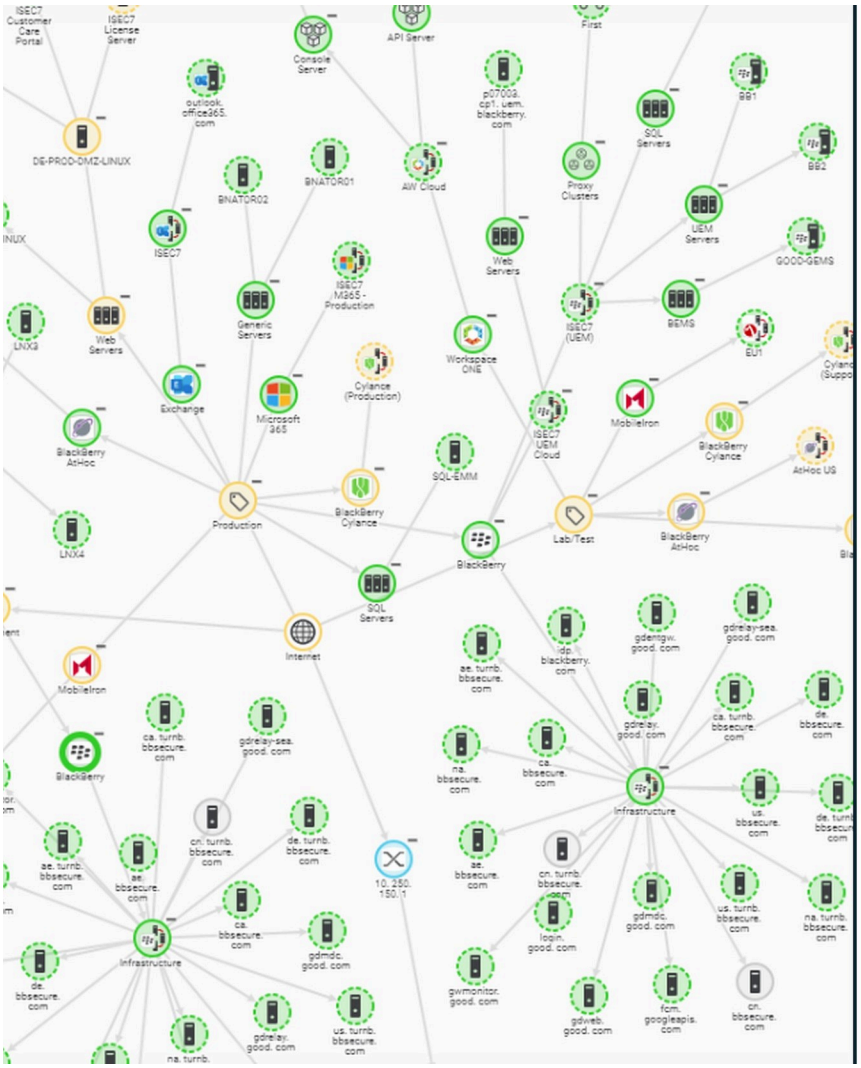
THE SOLUTION & USP

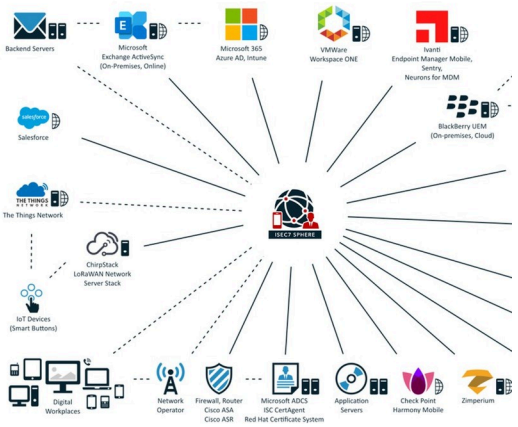
- Real-time monitoring for UEM servers, Exchange, Microsoft 365, servers and network components
- Known vulnerabilities: server versions are checked against the CVE database of the NIST
- What expires quietly: certificates, Apple ADE tokens, client secrets and patch levels
- indigo compliance monitoring for VS-NfD environments: policies, VPN status and iOS versions
- Alerts in Splunk, ServiceNow and Microsoft Teams
- Migration of devices and users between UEM systems, with guidance for the user

TARGET GROUP

- IT departments that run more than one UEM or prepare a migration
- Organizations that feed a SIEM or SOC with data from the mobile infrastructure
- Teams with a growing helpdesk load that want user self-service

Since 2003, the ISEC7 Group has run Digital Workplace and Managed Mobility Services for public authorities, international enterprises, operators of critical infrastructure (KRITIS), companies that handle classified information and other organizations with strict compliance requirements. Over 700 customers worldwide, among them governments, police forces and armed forces. ISEC7 is headquartered in Germany, with locations in the USA, Australia, New Zealand and Poland.





AREAS OF APPLICATION

- End-to-end monitoring of mobile devices, cloud services and on-premises systems
- Overview of CVEs, OS versions and app status across all platforms
- Compliance monitoring for certificates, policies and apps
- UEM migration, for example to Microsoft Intune or between on premises and cloud
- Automated reports for IT management and audits

IOT INTEGRATION

- Sensors, machines and connected devices in the same dashboard
- Connectivity via MQTT, LoRaWAN and REST APIs
- Rule-based automation with thresholds, triggers and escalations

ASSET AND LIFECYCLE MANAGEMENT

- Asset management with device lifecycle and mobile network data
- Ordering portal and user self-service for service tickets
- Telecom and IT expense management with cost centre allocation
