ISEC7
THE DIGITAL WORKPLACE COMPANY

ARCTIC WOLF

MANAGED SOC WITH ARCTIC WOLF

Someone looks at every alert. Around the clock.

Arctic Wolf detects and assesses from its Security Operations Center in Frankfurt. ISEC7 fixes what is found in your systems.

24/7
monitoring and triage in three shifts

SOC in Frankfurt
serves the German-speaking region

Your tools stay
cloud, firewalls, EDR, identity and Microsoft 365 connect

Clear roles
Arctic Wolf detects, ISEC7 remediates

CHALLENGE

Attackers rarely break in. They log in: through an old remote access, a reused password, a phishing link tapped on a smartphone. No patch helps against a login with valid credentials. What counts is whether someone notices, and who acts then.

Running your own SOC for that takes specialists in three shifts. Most organizations do not have them.

CAPABILITIES

The Arctic Wolf SOC monitors the connected sources around the clock, assesses every alert and reports confirmed incidents to your team with a recommended action. Whether an alert is real or a false positive is decided by a person.

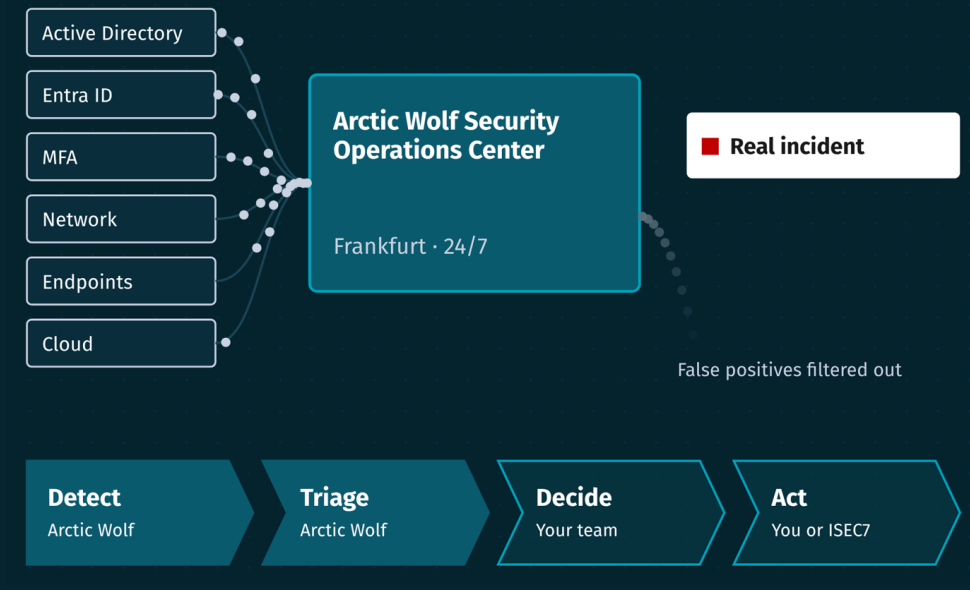
THE SOLUTION & USP

- Concierge Security Team: named German-speaking experts who know your environment
- Long-term development of your risk management by cybersecurity concierges
- Arctic Wolf's own platform instead of a purchased SIEM, vendor-neutral
- Existing security software stays in use and is connected
- Immediate measures such as isolating a host or locking an account, exactly as agreed during onboarding
- Awareness training and phishing simulations included
- Predictable costs

WHO DOES WHAT

Arctic Wolf detects and assesses. Your team decides. You or ISEC7 act in the affected systems: ISEC7 patches, reconfigures and closes the gap in UEM, Exchange and endpoints.

Since 2003, the ISEC7 Group has run Digital Workplace and Managed Mobility Services for public authorities, international enterprises, operators of critical infrastructure (KRITIS), companies that handle classified information and other organizations with strict compliance requirements. Over 700 customers worldwide, among them governments, police forces and armed forces. ISEC7 is headquartered in Germany, with locations in the USA, Australia, New Zealand and Poland.



AREAS OF APPLICATION

- 24/7 monitoring and threat detection
- Vulnerability and risk management
- Incident response and recovery
- Phishing simulations and awareness training
- Regular security reviews and reporting

TARGET GROUP

- Organizations without a SOC of their own that face NIS2 or DORA requirements
- Operators of critical infrastructure and public authorities
- Companies with complex IT landscapes that need short response times

WHERE ISEC7 COMES IN

- Advice, procurement and onboarding from one partner
- Remediation in your mobile and workplace infrastructure
- ISEC7 SPHERE shows expiring certificates and unpatched servers before they become an incident
