**ISEC7 and BlackBerry Unveil Sovereign Cloud for Enterprise and BSI Regulated Markets**

**Hamburg, Germany /Waterloo, Ontario, February 3, 2026** — ISEC7 and BlackBerry Limited (NYSE: BB; TSX: BB) today announced the launch of a sovereign cloud for BlackBerry® Unified Endpoint Management (UEM). The new platform is available in two variants: Enterprise (includes Knox) and BSI-compliant (Apple indigo). It is specifically designed for organizations with the highest requirements for data protection, information security, and regulatory compliance.

The sovereign cloud is operated entirely in Germany, meeting key requirements for data sovereignty, GDPR compliance, and national security standards. Operations are handled exclusively by qualified German personnel from ISEC7, providing additional transparency, control, and trust for customers in the public sector and other highly regulated industries.

"With ISEC7 as a strong and highly experienced partner, we are delivering a sovereign cloud option for BlackBerry UEM that meets the highest security requirements and gives customers in Germany and Europe true choice when it comes to data sovereignty," said Axel Conrad, Senior Director EMEA, Channel Sales Lead, BlackBerry.

A key advantage of the solution is the use of a data center location in Germany that meets the highest standards for physical and organizational security. The data center holds extensive certifications relevant to the public sector (ISO 9001, ISO 27001, KRITIS certification in accordance with BSI law, BSI C5, BSI IT baseline protection, TSI Level 4 and numerous other certifications), based on national and international security standards, providing a robust foundation for the secure operation of mission-critical IT infrastructures.

"Especially in the DACH region, we see rapidly growing demand for sovereign security solutions operated in Germany. Our collaboration with ISEC7 enables customers to use BlackBerry UEM in an environment that consistently aligns regulatory requirements with state-of-the-art technology." said Ulf Baltin, VP & Managing Director DACH, BlackBerry.

ISEC7 brings over 20 years of BlackBerry expertise to this partnership. As a long-standing specialist in secure mobile working and the operation of highly available UEM environments, ISEC7 supports customers from architecture and implementation through operations and compliance at the highest security level.

"Sovereignty, security, and trust are at the core of this solution. With over 20 years of BlackBerry experience and the combination of secure device and voice management, we provide our customers with a holistic, future-proof platform for secure mobile working." said Marco Gocht, CEO, ISEC7.

Additionally, the offering can be seamlessly combined with BlackBerry® Managed Secure Voice. This solution for VS-NfD-compliant, highly secure voice communications is operated from the same German data center and is optimally aligned with the sovereign BlackBerry UEM platform from both a technical and organizational perspective. Customers benefit from an end-to-

end sovereign solution for secure mobile work covering device management through to protected voice communications at the highest security level.

The new sovereign cloud for BlackBerry UEM enables organizations to securely manage mobile devices, applications, and data without compromising on control, transparency, or national sovereignty. The BSI-compliant variant specifically addresses customers with particularly stringent governmental security requirements.

**About BlackBerry**
BlackBerry (NYSE: BB; TSX: BB) provides enterprises and governments the intelligent software and services that power the world around us. Based in Waterloo, Ontario, the company's high-performance foundational software enables major automakers and industrial giants alike to unlock transformative applications, drive new revenue streams and launch innovative business models, all without sacrificing safety, security, and reliability. With a deep heritage in Secure Communications, BlackBerry delivers operational resiliency with a comprehensive, highly secure, and extensively certified portfolio for mobile fortification, mission-critical communications, and critical events management.
